

JOSEPH SLUTERBECK

Dayton, OH • 937-974-6336 • josephsluterbeck@gmail.com

Portfolio: <https://github.com/josephsluterbeck>

Education:

Bachelor of Science in Computer Science

December 2026

Wright State University, Dayton, OH

Associate of Science in Computer Science

September 2024

Sinclair Community College, Dayton, OH

Technical Skills:

Programming Languages: Python, Java, C/C++, JavaScript, SQL, HTML/CSS, Bash

Tools/Frameworks: React, Flask, Git, Docker, FastAPI, SQLAlchemy, Power BI, Power Apps, Active Directory

Work Experience:

IT Business Specialist: MEVA Formwork Systems, Inc.

April 2025 - Present

- Develop and maintain business applications using Microsoft Power Apps and Power Automate, streamlining workflows and reducing manual processes.
- Design Power BI dashboards and data models to provide engineering and management teams with actionable operational insights.
- Administer Microsoft 365, Active Directory, network infrastructure, and security systems across multiple company locations.
- Collaborate on cloud migration, infrastructure modernization, and AI-driven solutions, including an image recognition system for warehouse inventory management.

Projects:

IoT Data Transmission System (Senior Capstone)

Spring 2026 - Fall 2026

- Collaborating with a 5-person team to design a secure wireless data-exfiltration system.
- Architecting a dual ESP32 ESP-NOW bridge to wirelessly transfer encrypted image data from a Raspberry Pi to a Rebel Server, without Wi-Fi, Bluetooth, or cellular.
- Designing a computer vision pipeline using YOLOv8/OpenCV to detect red-circle markers, crop target images from a 100-image dataset, and reduce payload size before transmission.
- Specifying end-to-end encryption and OAuth 2.0 2FA on a FastAPI web server to restrict sensitive data to authenticated users.

GrumpyChef

Spring 2025

- Built a full-stack meal-planning web app using Flask, SQLAlchemy, and vanilla JavaScript; owned the login, home, profile, and shopping cart pages end-to-end across frontend UI, backend routes, and API integration.
- Developed the shopping cart feature with full CRUD – modal-based cart creation/editing, categorized grocery items, and REST API endpoints backed by SQLAlchemy models with user-scoped access and ownership validation.
- Implemented session-based authentication on the login page and a profile dashboard that aggregates user recipes and carts via Fetch API, with auth guards and logout flows across protected routes.
